

GoodVision in Numbers

Major achievements (as of 12/2024)

The United Nations' global Sustainable Development Goals (SDGs) set the direction for our future.

Our impact: We want all people worldwide to have permanent access to affordable, high-quality basic optical care.

GoodVision makes a significant contribution to achieving the following sustainability goals:

GoodVision 

Our vision

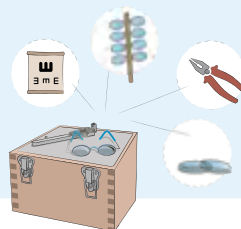

All people worldwide have permanent access to affordable and high-quality basic optical care, especially glasses.

Who we are

EinDollarBrille e.V. (GoodVision Germany) is a non-profit organization based in Erlangen, Germany, which has been committed to good vision in Africa, Asia and South America since 2012.

GoodVision 

Fields of activity

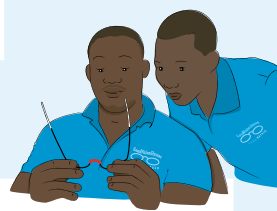

Glasses & Production

GoodVision Glasses consist of a light but stable spring steel frame. They are produced without electricity on a simple bending machine. The material costs for a pair of glasses are around one US dollar.

Vision tests

Before any pair of glasses is sold, a professional vision test must always be carried out by a qualified specialist. GoodVision organizes eye camps in remote villages, schools, factories or health centers.

Training and employment

GoodVision trains specialists in optics and eyewear production in the program countries.

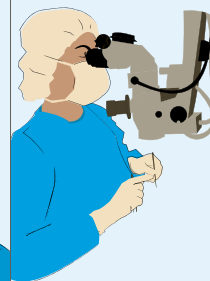

Awareness

Trained and sensitized regional experts meet their fellow citizens at eye level. They talk about the effects of glasses in their native language and gently try to dispel myths about poor vision.

Standards of quality

GoodVision stands for high-quality optical care and attaches great importance to providing the best possible care for people with defective vision.

Medical examination and treatment

The most important step before the actual vision test is to identify eye conditions for which glasses cannot help. In this case, a referral is made to an ophthalmologist.

Sustainability

GoodVision acts sustainably by establishing permanent production and distribution structures in the program countries.

Pankajini Pradhan

lives in the Indian state of Odisha. She developed cataracts at the age of 14. Fortunately, she was quickly operated on. Thanks to Care Netram, GoodVision's partner in India, she underwent a second eye operation at the age of 18, which saved her from going blind.

During the subsequent follow-up examination, a corneal curvature was detected – Pankajini needs glasses. The cost of the specially made glasses is shared between the family and Care Netram. Now Pankajini can look to the future with confidence.

The power of glasses
